Welcome to my

Little Corner

Adewara Emmanuel

GRAPHICS DESIGNER

I am an experienced Graphics Designer, passionate about creating extraordinary designs, with three years of expertise. Proficient in Photoshop, I consider it my favorite tool, showcasing my deep knowledge. Since childhood, I exhibited artistic flair, painting and drawing church backgrounds and posters. During the lockdown, I embarked on learning Graphics Design, starting with Corel Draw. While pursuing Mechatronics Engineering, a friend in my fellowship introduced me to Photoshop and design principles, shaping my creative path. Gratitude resonates within me for the supportive individuals who have influenced my journey. My designs are enriched by the integration of AI images, art, and composition, leveraging resources like BlueWillow, Midjourney, and ChatGPT.

emmanueladewara@gmail.com

Description and Design Process

The process of coming up with this design was such a one that is mindblowing. funfact is
I was gigven 2 days befopre the deadline to come up with this design. Sourcing for the right
image to depict the superuioty of the Bible was a bit hard because BlueWilow an AI tool I use
for Image Generation was not giving me what I wanted. I later sourced for the image on
Google and was shocked with the result. The images used were;

1. The Bible
2. Book Shelf
3. scattered Musical sheets
4. golden frame

The whole idea was to make trhe Bible firm and solid above any other book. The scattered
musical sheets, showed other books

Description and Design Process

Bean-burger is a special recipe found only in Chinwesrestaurant: a restaurant in Bells University of Technology. The recipe consists of bread, beans and plantain. To be honest, it is super deliciouscause I have tasted it before.

The images were sourced from google, a restaurant can be seen in the background, the specail recipe on a wooden table.

The whole idea was to create something eye-catchy such that the viewer would start salivating. I hope this experience happens to you.

Description and Design Process

Chukwu Jubilee Ifeanyi is a 400 Level student of Mechanical Engineering contesting for the post of The BUESA (Bells University Engineering Student Association) President.

As a Creative designer I had to create something that no one in the school is familiar with.
So, by God's grace and His Creativity I acam up with this design.
The blend of colours, text and nature drew the eys of many people. Infact, some people who met me were wowed with the text on the grass.

Thank God he won the election.

Software:
Adobe Photoshop, Adobe Lightroom, Davinci Resolve
